### Documents

Hi,

I have a widget page with "Documents and Media" widget.

When I click in the filter and order popup or in the search input box or in the display type popup the toolbar is displayed like a "picture" in the fancybox slider.

But the toolbar functions (filter, search type change) don't work.

If I close the toolbar with the close button or if I click outside the toolbar in order to close it, the toolbar is now hidden.

You have to refresh the page, but anyway the toolbar is unusable.
